

Smart Security GATEWAY

SMART VIDEO SURVEILLANCE

- Reduce False Alarms
- No Guard/Central Monitoring Needed
- Quick and Easy Installation
- Send Intelligent Alarms/Video Clips
- Email Reports
- Send Text Messages and Emails
- Remote Web Browser Monitoring

THE SIMPLIFIED
AND TOTALLY
AUTOMATED SOLUTION
FOR
REMOTE VISIBILITY,
SECURITY AND
NOTIFICATION

Smart VIDEO GATEWAY is your digital guard.

It watches the action so you don't have to. It finds the intruder and alerts you through email, text message and sends a video clip for your immediate verification.

Intruder is highlighted in red on the screen - a video clip is sent to your computer or PDA.

Limit the false alarms and get the assistance when you really need it.

It's not enough to simply detect movement. You determine the rules!

The Smart VIDEO GATEWAY determines:

- What the object is (person, car etc..)
- Is it moving or stopped?
- Which way is it moving?
- How many objects are there?
- Schedule time to alarm

Are you getting your money's worth? Reduce the costs and reliability issues with central monitoring services and guards.

Smart Security GATEWAY

Analog Camera

VideoIQ iCVR

No Separate NVRs or DVRs to buy, configure or maintain - each camera has a built in hard drive with hardwired I/O - There is no need to have local computers for archiving data.

Network Friendly - The iCVR minimizes bandwidth requirements imposed on the network - Since the iCVR records all the video for its associated camera, there is no need to stream video across the network until a specific alarm video clip is requested.

Intelligent Recording Quality - VideoIQ's content-aware storage with dual-encoding captures the events you define as important at the highest resolution and frame rate, while at the same time continuously recording all video at the usual lower quality settings used in DVRs.

Never lose video - VideoIQ systems never loses video recording when the network goes down - planned or unplanned - since everything is stored in the camera.

Advanced Analytics - VideoIQ's superior object recognition goes far beyond Advanced Motion Detection. This reduces "false alarms" thus ensuring timely alarm followup by the appropriate individuals.

Works with existing analog cameras - The Encoder can connect to an existing analog camera or can be supplied with its own integral camera - iCVR.

Remote Notification - The iCVR and Encoder have discrete I/O connected to the TBox which can activate alarm notification via email, paging or text messages.

Remote Viewing - The user can connect to the TBox remotely via phone, broadband or cellular and view alarms and camera video.
