

## Remediation Bisco Environmental / URS Corp.

### Key points of interest

Bisco Environmental provides turnkey remediation systems, control and monitoring solutions. TBOX MS modular series RTU / telecontrollers are offered on various equipment and systems.

Examples of systems and features:

- Dual-Phase Vacuum Extraction Systems
- Soil Vapor Extraction Systems
- Air Sparging Systems
- Air Strippers
- Oil/Water Separators
- Thermal Oxidizers
- Ethernet, Phone and Cellular coms
- Daily Reports and data logs
- Remote alarming, email and web access

### Overview

BISCO Environmental is an industry leading manufacturer and distributor of soil and groundwater remediation equipment. BISCO Environmental are specialists in the industry offering the most up to date solutions to meet monitoring and remediation needs.

URS Corporation is a leading engineering and consulting company offering evaluation, engineering and management of environmental cleanup services.

When URS needed a more flexible and cost effective means to control, remotely monitor and communicate to their Bisco remediation systems they turned to Integrasense and Tbox telecontrollers.

The TBOX telecontrol system provides an integrated cellular modem allowing remote communication and configuration from virtually anywhere. This enables URS to monitor and manage operation of the remote equipment without the need to travel hundreds of miles each week. Text Alarms and emails provide daily system status. The embedded web server allows engineers to monitor and adjust system operation remotely.
